

Health Sector Products - MEIGaN

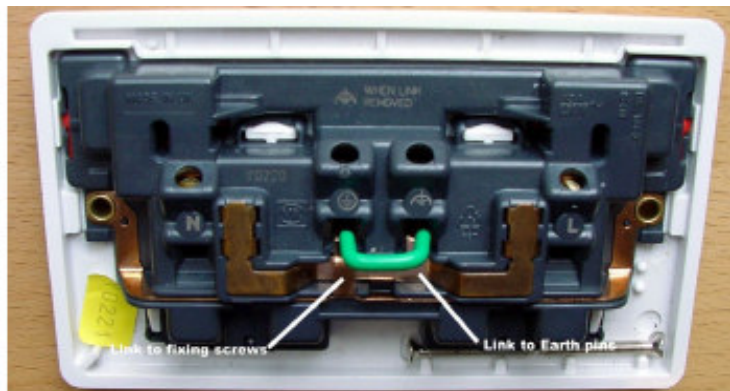

The MEIGaN document published in September 2007 has given healthcare organisations clear and strict guidance regarding the electrical wiring and installation within new, refurbished or upgraded healthcare establishments. In response to this MK are investigating product opportunities to specifically meet the requirements of the healthcare sector.

IPS (isolated power supply) socket outlets shall be double pole or unswitched clean earth sockets, colour coded blue, engraved in white lettering ‘Medical equipment only’’. Page 18, Para 6.1

Where existing metal back boxes are to be used, clean earth sockets shall be fitted. Page 18, Para 6.2

In order to meet these requirements MK are currently producing MEIGaN specific products through its design service.

It is important to note that in accordance with MEIGaN, where a plastic back box is not used, clean Earth sockets are also available. The picture below is the back of K2746 CE WHI and is taken directly from page 34 of the guidance notes as an example of a “good clean earth socket”.
